Useful DOS Commands:

Networking

ipconfig - Windows IP Configuration

ipconfig will tell you the IP settings for the current computer such as what your current IP is and what subnet/gateway you are on. It is great for troubleshooting. Here are the two most useful commands for ipconfig and usage:

ipconfig /all – Views detailed information about the installed network devices.

ipconfig /release - This will release any IP information that the computer was given and make your IP address 0.0.0.0

ipconfig /renew - This will ask any DHCP servers (usually your modem/router) for a new IP address.

ping - Check a connection or computer

Ping is used to check the health of a connection. The ping command will tell you whether a network device is responding and how fast it is running. The ping tool can also be used to convert a web address into an IP (eg. www.google.com = 74.125.19.99). Usage:

ping www.google.com - Pings a webserver to see if it can be reached or is responding. I personally use this to see if the computer I am on can reach the internet.

ping 192.168.0.1 - Pings a local address, often a modem, router or another computer.

netstat - Displays current TCP/IP connections

netstat - Will display what connections are currently active on the system. Useful for spotting programs calling back to base such as spyware.

File Management

type - Open text files

Similar to Unix's cat command, this command will display the contents of a text file in DOS as read-only. Usage:

type c:\sometextfile.txt

attrib - Make hidden files visible

Attrib can change the attributes of a file, such as whether its a system file or its hidden. This is especially useful to technicians because critical files such as the boot.ini is a hidden system file:

attrib -H c:\boot.ini - To unhide the boot.ini

attrib -S c:\boot.ini - To make remove its system file attribute

For more options with this command, type attrib /?
