The background of the slide features a complex, abstract graphic. It consists of several overlapping, curved, and wavy lines in shades of grey and light blue. A prominent feature is a path of small, light blue dots that curves across the lower half of the image, suggesting a trajectory or a mathematical model. The overall aesthetic is clean and modern, with a focus on geometric and mathematical forms.

A Concrete Approach to Mathematical Modelling Mike Mesterton-Gibbons, 2011-02-14 WILEY INTERSCIENCE PAPERBACK SERIES The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians, and scientists. A treasure house of material for students and teachers alike can be dipped into regularly for inspiration and ideas. It deserves to become a classic. London Times Higher Education Supplement. The author succeeds in his goal of serving the needs of the undergraduate population who want to see mathematics in action, and the mathematics used is extensive and provoking. SIAM Review. Each chapter discusses a wealth of examples ranging from old standards to novelty; each model is developed, critically analyzed, and assessed. Mathematical Reviews. A Concrete Approach to Mathematical Modelling provides in depth and systematic coverage of the art and science of mathematical modelling. Dr Mesterton-Gibbons shows how the modelling process works and includes fascinating examples from virtually every realm of human, machine, natural, and cosmic activity. Various models are found throughout the book, including how to determine how fast cars drive through a tunnel, how many workers industry should employ, the length of a supermarket checkout line, and more. With detailed explanations, exercises, and examples demonstrating real-life applications in diverse fields, this book is the ultimate guide for students and professionals in the social sciences, life sciences, engineering, statistics, economics, politics, business, and management sciences, and every other discipline in which mathematical modelling plays a role. Mathematical Modelling Murray S. Klamkin, 1987-01-01 Mathematics of Computing Miscellaneous *Effective Parameters of Hydrogeological Models* Vikenti Gorokhovski, 2012-01-04 Models of geological objects are tools for interpolation and extrapolation of available data in space and time. Continuously real structures of the objects are unknown, and their models and simulated results carry uncertainty which cannot be evaluated in a provable way. The real issue is obtaining effective predictions in a reasonably defined sense. This requires a knowledge of mechanisms that convert actual geological properties into effective model parameters. These mechanisms are introduced in the book. They reveal that effective parameters are not statistics but characteristics optimizing the system made up by geological surroundings. Their models, predictive problem formulations, including mathematical models of the simulated processes, boundary conditions, monitoring networks, criteria of efficiency, and even by time. Examples of evaluating and applying transformation for assigning effective parameters and solving inverse problems are presented. *Mathematical Modeling in Cultural Heritage* Gabriella Bretti, Cecilia Cavaterra, Margherita Solci, Michela Spagnuolo, 2023-08-07 This book collects contributions presented at the INdAM Workshop Mathematical modeling and Analysis of degradation and restoration in Cultural Heritage MACH2021 held in Rome, Italy, in September 2021. The book is focused on mathematical modeling and

simulation techniques with the aim of improving the current strategies of conservation and restoration in cultural heritage sharing different experiences and approaches The main topics are corrosion and sulphation of materials damage and fractures stress in thermomechanical systems contact and adhesion problems and phase transitions *Constructive Approaches to Mathematical Models* Richard James Duffin,1979 **Interdisciplinary Approaches to Nonlinear Complex Systems** Hermann Haken,A. Mikhailov,2012-12-06 Nonlinear dynamics is now recognized as playing a crucial role in a wide variety of disciplines But what is only just beginning is the important process of cross fertilization and transfer of knowledge and expertise from one area to another This book is intended to promote this process which will undoubtedly contribute greatly to furthering our understanding of complex systems Contributions are provided by leading experts from the areas of sociology cognitive science chemistry physiology ecology economics neural networks and physics **The Bulletin of Mathematics Books** ,1992 Language and Scientific Research Wenceslao J. Gonzalez,2021-04-27 This book analyzes the role of language in scientific research and develops the semantics of science from different angles The philosophical investigation of the volume is divided into four parts which covers both basic science and applied science I The Problem of Reference and Potentialities of the Language in Science II Language and Change in Scientific Research Evolution and Historicity III Scientific Language in the Context of Truth and Fiction and IV Language in Mathematics and in Empirical Sciences Language plays a key role in science our access to the theoretical practical or evaluative dimensions of scientific activity begins with the mastery of language continues with a deepening in the use of language and reaches the level of contribution when it creates new terms or changes them in sense and reference This reveals the compatibility between objectivity in semantic contents and historicity in the progress of science This volume is a valuable enrichment to students academics and other professionals interested in science in all its forms who seek to deepen the role that language plays in its structure and dynamics **Mathematical Reviews** ,2003 **A Methodological Study of Modeling for California Condors** Diane Beres,2000 **Library Recommendations for Undergraduate Mathematics** Lynn Arthur Steen,1992 **The Cumulative Book Index** ,1996 A world list of books in the English language *Subject Guide to Books in Print* ,1993 Russian Journal of Numerical Analysis and Mathematical Modelling ,2000 **Whitaker's Books in Print** ,1990 **Design and Planning of Engineering Systems** Dale Dean Meredith,1985 *New York Court of Appeals.
