When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object's speed and direction will remain the same. This is called Newton's first law of motion.</p> <p>Another important concept is acceleration. Acceleration is the rate at which an object's velocity changes. This means that if an object is accelerating, its speed or direction is changing. This is called Newton's second law of motion.</p> <p>Friction is a force that opposes motion between two surfaces in contact. It is caused by the roughness of the surfaces and the attraction between the molecules of the two surfaces. Friction can slow down an object or stop it completely. This is called Newton's third law of motion.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is NOT a force? <ol style="list-style-type: none"> Gravity Friction Acceleration Tension Which of the following is NOT a force? <ol style="list-style-type: none"> Gravity Friction Acceleration Tension Which of the following is NOT a force? <ol style="list-style-type: none"> Gravity Friction Acceleration Tension Which of the following is NOT a force? <ol style="list-style-type: none"> Gravity Friction Acceleration Tension <div style="text-align: right;">  </div>
