2.5 The Demographic Transition Model

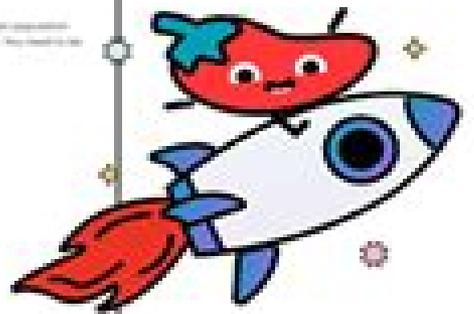

Demographic Transition Model

The Demographic Transition Model (DTM) is a model that describes the changes in population growth over time. It is based on the relationship between birth rates and death rates. The DTM is divided into five stages: Stage 1, Stage 2, Stage 3, Stage 4, and Stage 5.

Stage 1

Stage 1 is the only stage of high birth rates and high death rates. Because of this, the natural increase rate is close to zero. The population grows slowly because the high birth rate is offset by the high death rate. The birth rate and the death rate are both high because of high infant mortality.
