

INSTALLATION GUIDE

CONCRETE + COMPOSED, COMMUNITY LVT

Thank you for choosing our flooring. When properly installed and cared for, your new flooring will be easy to maintain and will keep its great look for years. Please read all the instructions before you begin the installation. Improper installation will void the warranty.

IMPORTANT NOTES

- Set out of the material is the most important part of the installation and should be done prior to starting the installation. Take your time getting this right.
- To get the correct expansion gap for a floating floor the use of spacers is recommended for the first row of planks/tiles. A 6mm spacer is the minimum recommendation.
- For a glue down installation measure out one row of tiles from the starting wall, drop a chalk line and install three rows of tiles/planks placing them into the wet adhesive and then roll with a heavy floor roller. This will give you a solid base for the remainder of the installation. Leave a 4-5mm gap for a glue down installation.
- The recommended adhesive for a glue down installation is Uzin KES8T with a V2 trowel.
- Keep the area of the installation clean. Use a vacuum cleaner or good broom to clean the entire space. This will keep the locking mechanisms clean during the installation.
- Don't glue more of the floor area than you can cope with at one time. The planks need to go into the wet adhesive.
- Work from left to right, a row at a time, making sure each tile/plank is installed properly.
- Tap down all cross joints with a rubber mallet and make sure they are down properly and locked in.
- Always drop chalk lines for glue lines and never glue up to the edge of the last tile. Stay back at least 10mm under the tile. This will help with the installation of the next tile to make sure it can be clicked into the locking mechanism without getting caught up in drying adhesive. This is very important.
- In areas of high heat make sure you block out direct sun light with curtains or by hanging pattern paper or similar on windows and ranch sliders.
- The use of the correct expansion gaps should always be followed. This material cannot be restricted in any way even when glued to the substrate.
