

Cisco Unified Communications Manager 12.0

Cisco® Unified Communications Manager is the heart of Cisco collaboration services, enabling session and call control for video, voice, messaging, mobility, instant messaging, and presence.

Product Overview

What if you could collaborate more effectively with customers and partners on any network? With any device? From anywhere? Cost-effectively, reliably, and securely? With Cisco Unified Communications Manager, you can.

Today's workplace challenges the collaboration environment in unprecedented ways. More mobile workers use more devices than ever before. Web and video conferencing intersect.

We are the industry leader in enterprise call and session management platforms, with more than 200,000 customers worldwide and more than 85 million Cisco IP Phones and tens of millions of soft clients deployed. Cisco Unified Communications Manager is the core of Cisco's collaboration portfolio. It delivers people-centric user and administrative experiences while supporting the full range of collaboration services, including video, voice, instant messaging and presence, messaging, and mobility on Cisco as well as third-party devices.

Table 1 lists Major Features in Cisco Unified Communications Manager Version 12.0.

Table 1. High-Level Features in Cisco Unified Communications Manager 12.0

Feature	Benefits
Push notifications	<ul style="list-style-type: none"> • Cisco Unified Communications Manager and the IM and Presence service use Apple's cloud-based Push Notification service to push voice and video calls, instant messaging notifications, and Cisco WebEx™ invitations to Cisco Jabber™ for iPhone and iPad clients that are running in suspended mode. • Push Notifications in Cisco Unified Communications Manager enable users to maintain a persistent communication with Cisco Jabber. • Push Notifications are required both for Cisco Jabber for iPhone and iPad clients that connect from within the enterprise network and for clients that register to an on-premises deployment using Expressway's Mobile and Remote Access (MRA) feature. • Push Notifications high availability provide failover and redundancy for Push Notifications-enabled IM and Presence sessions for Cisco Jabber on iPhone and iPad clients. This makes sure that the backup node has the session information and can take over the session without user action from the Jabber user. For voice and video calls, redundancy and failover are handled by Cisco Unified Communications Manager groups. • Push Notifications troubleshooting sends the troubleshooting information to the Cisco cloud at regular intervals. Cisco may use this information for proactive debugging of Push Notifications and system components. This speeds up system troubleshooting by making sure that Push Notifications alarms can be accessed quickly by the Cisco TAC.
Cisco Spark™ Hybrid Services	<ul style="list-style-type: none"> • Home Cluster Routing enables the Session Management Edition (SME) to route calls from a Cisco Spark Hybrid Call Service Connect user via Expressway-C/E Server traversal solution to the caller's home Cisco Unified Communications Manager cluster, where they anchor on the caller's Cisco Spark remote device. Calls are routed based on route headers, complying with RFC 3261. In large deployments, this helps in having fewer direct SIP trunks and less call routing configuration. • Verified Identity and Call Anchoring feature allow inbound calls to be anchored by caller identity matching a remote destination only when caller identity is trusted. This will prevent fraud by callers attempting to impersonate authorized users of Dual via Office (DVO) or Call Service Connect. • Dedicated remote device enables call service connect with no incremental licensing effect for users with at least UCL enhanced licensing.
