en mathématiques la cohomologie galoisienne est l'étude de l'action d'un groupe de galois sur certains groupes par des méthodes cohomologiques elle permet d'obtenir des résultats à la fois sur le groupe de galois agissant et sur le groupe sur lequel il agit en particulier le groupe de galois d'une extension de corps de nombres L/K agit naturellement par exemple sur le groupe multiplicatif L^\times mais aussi sur le groupe des unités de l'anneau des entiers du corps L ou sur son

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group G associated to a field extension L/K acts in a natural way on some abelian groups for example those constructed directly from L but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
