

# Chicken Wing Anatomy Lab

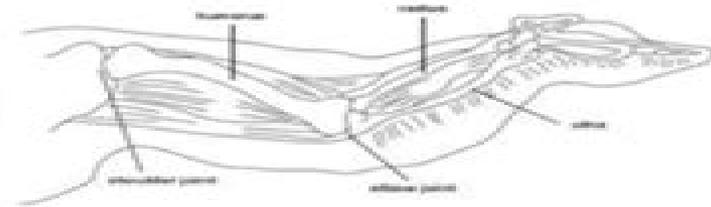

## OBJECTIVES:

- Observe the different tissues that make up a bird's wing.
- Relate the structure of a bird's wing to its function.
- Compare and contrast the range of motion of a bird's wing with that of the human arm.
- Observe the movement of opposing pairs of muscles.

**CAUTION:** Raw chicken may be contaminated by Salmonella. Keep your hands away from your face and mouth throughout this investigation.

1. Compare your chicken wing to the diagram.
2. At the cut end of the upper wing, slip the tip of the scissors between the skin and the muscles underneath.
  - What skin layer are you under?
  - What does the muscle tissue look like?
3. Cut the skin lengthwise, to the joint between the upper wing and the lower wing.
  - Which joint in your body corresponds to this joint in the chicken wing?
4. Using scalpel and scissors carefully remove the skin from the joint between the upper and lower wing. Be careful not to cut any tendons or ligaments.
  - How will you recognize tendons and ligaments?
5. Remove the skin of the lower wing in the same way that you removed the skin from the upper wing. Leave the skin on the wing tip.
6. Using scissors, remove any tissues covering the muscle. Use a blunt probe to separate the individual muscles from each other without tearing them. On a sheet of paper, draw your chicken wing in pencil showing all of its separate muscles.
7. Straighten the chicken wing and hold it horizontally above the tray. Pull on each of the muscles and note the movement that each muscle causes. Turn the wing upside down and bend the joints. Again pull on each muscle and note how the bones move. On your drawing, outline in color each muscle that *flexes* a joint. Then outline in color each muscle that *extends* a joint (see picture below). Be sure to provide a color key as to what your colors represent.
