# Selecting Statistical Tests

We have now arrived at the point where we have to talk about selecting the appropriate statistics to test hypotheses. In several earlier chapters we talked in general terms about the necessity of inferring that two variables covary, as part of establishing that a causal or covariance relationship exists between them. And in Chapters 11 and 12 we have described some basic outlines of how this is accomplished.

The way we detect covariance is through the use of inferential statistical tests, but there are hundreds of these statistical tests. How should you select the ones to use?

### The Six Questions

To answer this question, we'll have to back up a little and talk about the characteristics of your research design and variable measurement that you need to consider. These will guide you toward the appropriate statistical test.

We'll try to simplify this by posing a set of six questions that apply to your research design and variables. The pattern of answers to the questions will point toward the appropriate statistical test.

1. *How many independent variables covary with the dependent variable?* If the answer is "one", you will use bivariate statistical tests. If it is more than one, you will need multivariate statistical tests.
2. *At what level of measurement is the independent variable?* If the independent variable is conceptualized as a nominal variable, the hypotheses will be comparative, and you will need a statistical test that compares two or more groups, where each group represents one level of the indepen-
