Collaborative Knowledge In Scientific Research Networks:

Collaborative Knowledge in Scientific Research Networks, 2014 *Collaborative Knowledge in Scientific Research Networks* Diviacco, Paolo, 2014-10-31 Research inherently requires collaborative efforts between individuals, databases and institutions. However, the systems that enable such interpersonal cooperation must be properly suited in facilitating such efforts to avoid impeding productivity. *Collaborative Knowledge in Scientific Research Networks* addresses the various systems in place for collaborative e-research and how these practices serve to enhance the quality of research across disciplines. Covering new networks available through social media as well as traditional methods such as mailing lists and forums, this publication considers various scientific disciplines and their individual needs. Theorists of collaborative scientific work, technology developers, researchers, and funding agency officials will find this book valuable in exploring and understanding the process of scientific collaboration. *The Collaborative Era in Science* Caroline S. Wagner, 2018-10-25 In recent years, a global network of science has emerged as a result of thousands of individual scientists seeking to collaborate with colleagues around the world, creating a network which rises above national systems. The globalization of science is part of the underlying shift in knowledge creation, generally the collaborative era in science. Over the past decade, the growth in the amount of knowledge and the speed at which it is available has created a fundamental shift where data, information, and knowledge were once scarce resources; they are now abundantly available. Collaboration, openness, customer or problem-focused research, and development, altruism, and reciprocity are notable features of abundance, and they create challenges that economists have not yet studied. This book defines the collaborative era, describes how it came to be, reveals its internal dynamics, and demonstrates how real-world practitioners are changing to take advantage of it. Most importantly, the book lays out a guide for policymakers and entrepreneurs as they shift perspectives to take advantage of the collaborative era in order to create social and economic welfare. **Knowledge Creation, Diffusion, and Use in Innovation Networks and Knowledge Clusters** Elias G. Carayannis, David Campbell, 2006 In the 21st century, intangible resources such as knowledge and social capital have become as necessary to the modern economy as coal, diamonds, and oil were to the past. This shift from product-focused to service-focused economies necessitates a drastic rethinking of the ways in which we support the mission and business of economic development on a global, regional, and national scale. In order to effect and sustain a positive change, innovation and knowledge networks need to be connected to every aspect of life, from the private and domestic to the corporate and the global. This book integrates a wide variety of perspectives and treatises on mutually adaptive and complementary processes of knowledge generation, diffusion, and transfer within organizations and industry, addressing both the what and how to questions of knowledge management in a conceptual as well as an applied manner. It should be of strong interest to science and technology policy makers, research and development managers, business decision makers, and students of innovation and knowledge dynamics alike. *UK and European Science Policy* Kirsty Hughes, Ian Christie, 1995 This book

based on in depth comparative case studies assesses the relationship between EU and UK science policy the costs and benefits of cooperative research networks and the determining factors of successful management and operation of networks
